

# Bassidor®

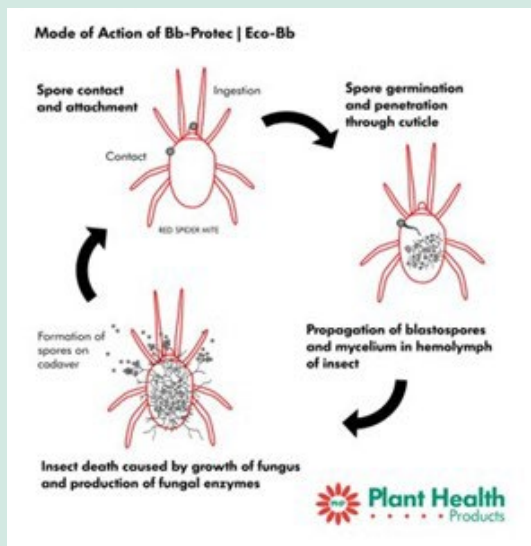

Management of Whitefly and Twospotted Spider Mite in Greenhouse Crops

Bassidor® is an **insect-pathogenic fungus**, containing numerous small conidia that have the ability to germinate and penetrate into insects. Bassidor® must be applied every 3-7 days to ensure control of targeted pest. Bassidor® is the perfect product for intergrated plant protection programs.

### *Beauveria bassiana* strain FZ444 Mode of Action:

The bacteria germinates on the cuticle of the insect, **and propagates in the hemolymph of insect**. This causes insect death and more spores produced on the cadaver.

### Advantages of Bassidor®

- ✓ Wettable Powder
- ✓ Excellent Resistance Management Tool
- ✓ Low REI & Minimal PHI
- ✓ Non-Toxic and Safe
- ✓ Compatible with most agri-chemical products
- ✓ Easy Storage
- ✓ Good Rain fastness
- ✓ For conventional and organic pest management
