

aPhinity PFW®

A Better Method of Detection

Technical Information

Target Pest

Pine False Webworm (*Acantholyda erythrocephala*)

Host

All species of Pine (*Pinus*) trees

Active Ingredient

(Z)-6, 14-pentadecadienal

Storage Information

Store for up to 2 years at -18° C

Load Rate + Release Rate

100µg

Product Information

aPhinity PFW™ is a revolutionary lure used for detection of the Pine False Webworm. The female produced sex pheromone is used to attract flying males. The lure is not harmful to the environment, humans, or pets.

Pine False Webworm is a pamphiliid sawfly of European origin that is now present in several parts of Eastern North America. The larvae have yellowish coloured heads with small brown spots and greenish-gray bodies. The larvae feed primarily on old foliage, however, when old foliage on a tree has been consumed, they will feed on the current year's needles, ultimately causing severe defoliation.
