

# TM Biocontrol®

## Flowable Biological Insecticide

### Pest

TM Biocontrol is a viral insecticide that is used in the biological control of the Whitemarked tussock Moth (*Orgyia leucostigma*) and the Douglas Fir tussock Moth (*Orgyia pseudotsugata*). These invasives are a significant defoliator of Douglas-fir and true-fir forests of western North America. Outbreaks have occurred in many regions from British Columbia to Arizona and New Mexico, and from the Rocky Mountains to the Cascade and Siskiyou ranges of Washington, Oregon, and California.

### Product

Suppression efforts with TM Biocontrol are necessary in order to manage these invasive pests and to protect natural resources as well as forest integrity. The product can be applied by ground or by air and as with all baculoviridae, only the target species is affected.

### PRODUCT-FACTS

#### Against

Whitemarked Tussock Moth  
(*Lymantria dispar*)

#### Active ingredient

Douglas-fir tussock moth  
nucleopolyhedrovirus

#### Formulation type

Suspension Concentrate Insecticide

#### Application area

Tree canopy - Aerial Application
